Portfolio: peppered.design | LinkedIn: <https://www.linkedin.com/in/olga-pertseva/>

Summary

Senior Product Designer with 10+ years of experience designing complex operational systems across payments, logistics, enterprise, internal tools and the public sector. I design for people working under pressure, where a wrong tap costs time or money and nobody has time to read a manual.

Much of my work sits at the intersection of hardware and software, from touchscreen POS and RFID payments to a gesture-controlled instrument. I usually own products end to end, from field research and system logic to working software in code, which I now build in code with Cursor. Many of these products are still in use years later.

Selected Experience

Senior Product Designer | Quray, music hardware startup

Remote | 2026–present

Sole designer for a **music-tech startup** building a touchless MIDI/CV controller you play in mid-air, where movement becomes sound in real time. Designed the interaction model, sensor-to-sound mapping, and the **web configurator** that controls it. Built and tested a [coded prototype](#) with the physical device. The instrument was shown at Superbooth Berlin. [Case Study](#)

Senior Product Designer | Independent & Contract

Remote | 2019–2026

Moved into independent work to focus on hands-on product design. Selected projects:

- Built Subway Russia's first digital platforms for **6,000+** staff across **400+** restaurants: a **training and certification system**, and an **onboarding platform for franchise owners** launching new locations. Certification rates increased by **60%** compared with the previous in-person programme. [Case Study](#)
- Designed regulated **public-sector** and **enterprise systems** for two federal transport agencies, internal government teams, and a corporate pension platform, clarifying mandatory workflows without removing legally required steps.
- Since 2024, continued client work alongside self-initiated projects taken from idea to working software in code.

Senior Product Designer | Billfold POS, US cashless payments startup

Long-term contract | Remote | 2017–2023

Sole product designer from the first rough hardware prototype to an **RFID payment ecosystem** running at festivals and stadiums worldwide. [Case Study](#)

- Designed a full **ecosystem from scratch**: registration kiosks, dual-screen POS, dashboards for organisers. Hundreds of screens covering payments, refunds, donations and offline states.
- Designed for temporary staff, distracted guests, and high-volume venues. The system handled **200+** orders per hour, while bartenders processed **23%** more transactions.

Lead Product Designer | Gazelkin Logistics

On-site | 2017–2019

Led a six-person product team as its only product designer and the bridge between product and business. Designed the **connected ecosystem** at one of Russia's largest urban cargo companies: driver app, call-centre system, dispatcher dashboard, customer booking. **700** vehicles, **150** operators.

Conducted field research through full shifts with drivers, peak hours in the call centre, and customer calls taken firsthand. Average call time dropped from **4.2** to **2.5 minutes**; **92%** driver adoption in 3 weeks. [Case Study](#)

Lead Product Designer | CSI / Dreamkas

On-site | 2014–2017

Joined as the only designer, left having **built the design team**. Designed Russia's **first touchscreen POS** and **self-checkout systems**, rolled out across thousands of stores including Lenta, SPAR, OBI.

A change in fiscal law gave every shop in the country months to switch, so the system had to be learnable on the first shift. Checkout ran **25% faster** than the button-based registers it replaced.

Researched in store, watching cashiers work through peak hours, with eye-tracking to find where the screen lost them. Still running today, largely unchanged. [Case Study](#)

Core Competencies

Domains: Fintech & payments, B2B SaaS, enterprise UX, internal and operational tools, POS, logistics

Product strategy & UX: Discovery, problem framing, user flows, workflow design, information architecture, accessibility (WCAG), stakeholder management, cross-functional collaboration

Research: User interviews, field research, usability testing, journey mapping, workshops

Design systems & delivery: Component libraries, tokens, prototyping in code, developer handoff

Tools & AI: Figma, Cursor, Claude, React, HTML/CSS, Adobe CC, AI-assisted workflows

Education

Master's / Engineer's Degree, **Computer Engineering**, ITMO University

Bachelor's / Second Degree, **Graphic Design**, State Polytechnic University
