Summary

Senior Product Designer with 10+ years of experience designing complex operational systems across payments, logistics, retail and enterprise software.

Much of my work sits where **hardware meets software**, from touchscreen POS and RFID payments to a gesture-controlled instrument. I design for people working under pressure, where a wrong tap costs time or money and nobody has time to read a manual. **I own products end to end**, from field research and system logic to working software I build in code. Most of these systems are still in use. One of them has been running largely unchanged in thousands of shops for ten years.

Selected Experience

Founding Product Designer | Quray, music hardware startup

Remote | 2025–present

Owned the product from the earliest hardware prototype at a music-tech startup building a touchless MIDI/CV controller you play in mid-air, where movement becomes sound in real time: research, product decisions, interaction model, and the web configurator that controls it. Built and tested a [coded prototype](#) with the physical device. Shown at Superbooth Berlin. [Case Study](#)

Senior Product Designer | Billfold POS, US cashless payments startup

Remote | Part-time contract · 2017–2022 | Full-time · 2022–2024

Sole product designer from the first rough hardware prototype to an **RFID payment ecosystem** running at festivals and stadiums worldwide. [Case Study](#)

- Designed a full **ecosystem from scratch**: registration kiosks, dual-screen POS, dashboards for organisers. Hundreds of screens covering payments, refunds, donations and offline states.
- Designed for temporary staff, distracted guests, and high-volume venues. The system handled **200+** orders per hour, while bartenders processed **23%** more transactions.

Senior Product Designer | Subway restaurant chain

Hybrid | 2020–2022

Built the **first digital platforms** for a regional Subway operator: **6,000+** staff, **400+** restaurants, a training and certification system, and an onboarding platform for franchise owners. Certification rates increased by **60%** compared with the previous in-person programme. [Case Study](#)

Senior Product Designer | Regional government platform (under NDA)

On-site | 2019–2020

Designed the **internal planning system** for the government of a five-million-person region, built in-house on top of the state document management system after commercial CRM was ruled out. A **tablet app** for officials and a **web tool** for the assistants who plan their days. Nothing shipped without a round-table sign-off from eight to ten senior officials.

Senior Product Designer | Gazelkin, urban logistics platform

On-site | 2017–2019

Led a six-person product team as its only product designer and the bridge between product and business. Designed the connected ecosystem at an urban cargo company running **700** vehicles with **150** call-centre operators: driver app, call-centre system, dispatcher dashboard, customer booking.

Conducted field research through full shifts with drivers, peak hours in the call centre, and customer calls taken firsthand. Delivery errors fell by 30% and average call time dropped from 4.2 to 2.5 minutes; 92% of drivers were using the new app within three weeks. [Case Study](#)

Senior Product Designer | CSI / Dreamkas

On-site | 2014–2017

Joined as the only designer, left having **built the design team**. Designed the country's **first touchscreen POS** and **self-checkout systems**, rolled out across thousands of stores including SPAR and OBI.

A change in fiscal law gave every shop in the country months to switch, so the system had to be learnable on the first shift. Checkout ran **25% faster** than the button-based registers it replaced. Researched in store, watching cashiers work through peak hours, with eye-tracking to find where the screen lost them. Still running today, largely unchanged. [Case Study](#)

Core Competencies

Domains: Fintech & payments, POS, B2B SaaS, enterprise UX, internal and operational tools, logistics

Product strategy & UX: Discovery, problem framing, user flows, workflow design, information architecture, accessibility (WCAG), stakeholder management, cross-functional collaboration

Research: User interviews, field research, usability testing, journey mapping, workshops

Design systems & delivery: Component libraries, tokens, prototyping in code, developer handoff

Tools & AI: Figma, Cursor, Claude, React, HTML/CSS, Adobe CC, AI-assisted workflows

Education

Master's / Engineer's Degree, **Computer Engineering**, ITMO University

Bachelor's / Second Degree, **Graphic Design**, State Polytechnic University
